# The way to examine

For people with dementia, a stay in a hospital is a special situation: they are in an environment that is foreign to them, they are surrounded by people they do not know, and the daily routine is very different from their own. Consequently, they have to adapt to the new circumstances.

The aim of this training scenario is to simulate difficulties in adaption to new circumstances (due to loss of orientation, visual impairments etc.) in an acute care hospital.

# Simulation Activity: Losing your things

**Role-play**

**Simulation Glasses**

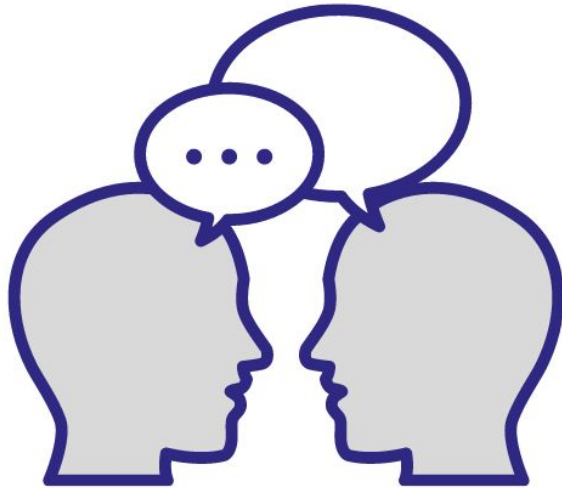

**Headphones**

**15 mins**

## Group reflection

How did you experience the situation?

What can you take away from the scenario for your (professional) everyday life?
