

# Dementia Simulation Toolkit Scenario: Eating Meals

Co-funded by the Erasmus+ Programme of the European Union

social IT

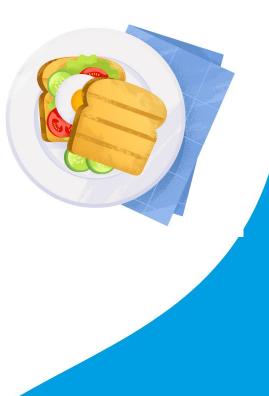

MARTIN-LUTHER-UNIVERSITÄT HALLE-WITTENBERG

## **Eating Meals**

- Visual function is often reduced in people with dementia conditions such as lewy body dementia, Alzheimer's disease, posterior cortical atrophy and vascular dementia.
- This can impact meal times and the ability to see food on a plate.

## **Eating Meals**

- Difficulties differentiating between food and plate due to poor contrasting colours e.g. rice on a white plate.
- Patterned crockery can cause confusion as the pattern may be perceived as food.
- As a result, changes to visual function may reduce a person's food intake.

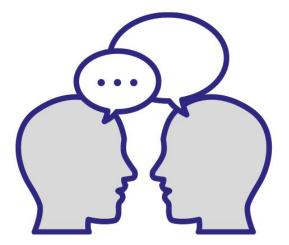

### **Simulation Activity: Losing your things**

	Of manual 1		
3 Plates of Food	Simulation Glasses	Cutlery	
	<del>آ</del> 15 mins		

How was your self- experience of reduced visual function?

#### **Group discussion**

How might you support a person with dementia during meal times?
