

Simulation Gloves

The Cambridge Simulation Gloves

simulate reduced functional ability of the hands. Plastic strips limit the strength and range of motion of the fingers and thumb.

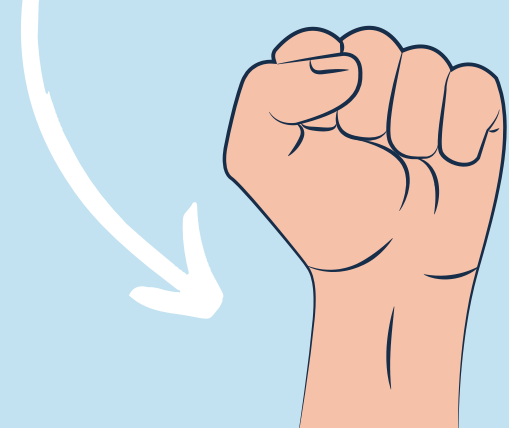

Reduced sensitivity gloves

simulate reduced feeling in your fingers, which is common to ageing & dementia

Hacks:

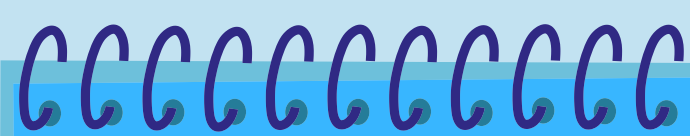

Tape some of your fingers together to mimic functional loss or wear gloves you already have at home

You can also tape buttons to your knuckles to limit the movement of your joints

Training Scenarios:

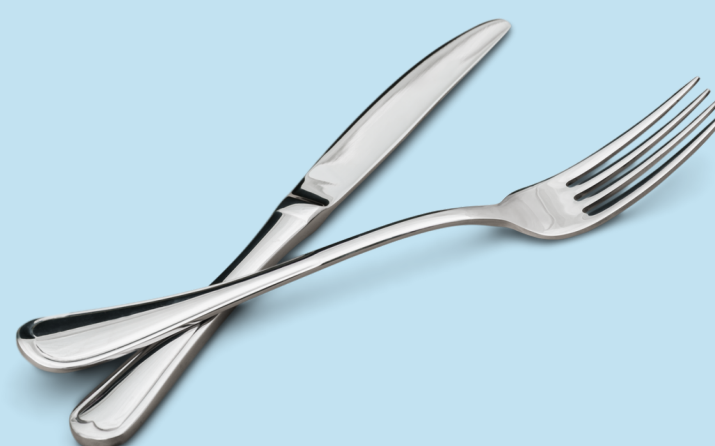

These tools may not represent everyone's experience with dementia

Dressing yourself & personal care can become difficult, e.g., buttoning a shirt

Using cutlery can be challenging if our fingers are restricted

Using small devices like phones & TV remotes can be difficult
